Dangerous Goods is an Extender for Shipment Connector. The solution lets you manage and ship hazardous materials safely and compliantly in Microsoft Dynamics 365 Business Central. It centralizes all Dangerous Goods data for items, including UN numbers, ADR classes, transport categories, and translations, and works seamlessly with the Shipment Connector to transfer the information to carriers.

Usage scenario

A Warehouse Operator prepares an order containing hazardous materials. They pick and pack the items, then navigate to the Waybill lines and finds the Dangerous Goods field.

The operator can automatically generate all required dangerous goods lines or select specific items manually. Once completed, the shipment includes all necessary hazardous material information and ADR documentation, ready to be sent through the carrier.

This workflow ensures compliance with international regulations, prevents errors, and streamlines daily shipping operations involving hazardous goods.

Added value

UN Numbers

Define hazardous material classifications for each item.

Translations

Support multiple languages for international shipments.

Transport Categories

Assess the hazard level of each item for compliant shipping.

Item Card Integration

Link dangerous goods data directly to items in Business Central.

Shipment Connector Integration

Automatically include all dangerous goods information in shipments and generate required ADR documentation via the multi-carrier platform.

Requirements & Specifications

- ▶ Designed for Microsoft Dynamics 365 Business Central
- ▶ The solution is available on Microsoft AppSource
- ▶ Requires installation of a Shipment Connector by XtensionIT
