24-08-2020 12:50		Modify	{5ba62f44-e5c6-4928-b87d-80c00...	Failure	A field list could not be created.

Application

This is not an error, but a notification. The message to the User is that there is a Record with one or more modification detected for transfer but None of these fields is mapped for transferring.

Technical

When a Record is marked as modified. Multi Entity Management prepare the transfer of the field modification to the subscriber companies in the following way.

A list is created with the fields, that are changed. But If none of these modified fields, is mapped for transfer to the subscriber companies, the field is removed from the list. If all the modifies fields is removed, the list cannot be created, which results in the notification “A field list could not be created”.
